

Loxone guarantees complete smart lighting control with new DALI Extension

London, 27 May 2016: Leading smart home provider [Loxone](#) has broken down the barriers between different lighting standards by adding DALI integration to its already extensive lineup. With the new Loxone DALI Extension, up to 64 DALI devices can be controlled, in up to 16 groups and seamlessly integrated with other standards, such as 0-10V, DMX, Loxone Air, etc. for the most versatile lighting schemes.

Loxone builds on many years of experience in lighting controls and app design for its over 200,000 users. The result is a DALI integration that is quick and simple. A convenient 'device search' discovers connected DALI devices and allows their configuration with only a few clicks. In mere minutes, users can switch, dim or combine their new lights into custom lightings scenes via their app.

As an vendor neutral standard for digital lighting control DALI is the preferred choice for many lighting designers as it allows style and design to remain at the forefront, without having to worry about compatibility of fittings and drivers.

For those who need more than 64 devices, another DALI Extension can be easily added to support more devices. Supports DALI device types include Type 0 (Fluorescent Lights), Type 3 (LV-Halogen Lights) and Type 6 (LEDs).

The DALI Extension is available now from the [Loxone Webshop](#) priced at £447.
