

New Nano Dimmer Air opens up huge possibilities for retrofit lighting control with Loxone

Users can now create even more dynamic lighting scenes without the hassle of rewiring

Reading, UK - 1st September 2016: The Nano Dimmer Air is the latest product to join the Loxone Air product range, enabling homeowners to fully automate the dimming of mains lighting without needing to chase walls or pull additional cables.

[The Nano Dimmer Air](#) is a single channel, leading or trailing edge dimmer for mains voltage bulbs. With dimensions of 53 x 53 x 31mm the compact Nano Dimmer Air fits happily in the wall cavity behind most switch plates, or alternatively can be placed in the cavity behind the ceiling rose.

Powered by Loxone Air technology, the Nano Dimmer Air communicates wirelessly with the Miniserver to control the lighting according to the house's daily schedule.

The new Autopilot Designer feature in the Loxone Smart Home App enables users to set up specific 'Autopilots' to suit their lifestyles. This could be something as simple as switching the lights off if no-one is at home after 9am.

A 'smart alarm' function could see the bedroom lights slowly fade up to avoid the jarring brightness that greets so many of us when getting up on those dark winter mornings.

Similarly, if occupants regularly get up in the night to visit the bathroom or to check on the children, the lights could come on at a very low level of brightness to provide enough light to provide safe passage throughout the house without disturbing others.

In addition, all Loxone Air Products are optimised for low energy consumption. In standby mode, the power consumption of the Nano Dimmer Air is typically 0.4W.

Contrary to typical opinion, full smart automation right across the home is affordable and can be retrofitted into any property, from cottages to apartments to semi-detached houses, making it more accessible than ever for any homeowner. To find out more visit www.loxone.com.

About Loxone

Loxone are the inventors of the Miniserver powered, centrally managed Smart Home – the one with the highest IQ. With over 40,000 completely integrated Smart Homes, Loxone has captured the attention of the market in just seven years. Through the independent control of all aspects in a home, the Miniserver acts like an autopilot, running the home automatically at the most efficient level possible. With more than 250 employees spread across 12 offices, Loxone is one of the fastest growing companies in the Smart Home industry.
